

Overview

In today's business environment organizations of all types are turning to the cloud as a viable alternative for data storage and software-as-a-service. As a result, more and more users are going directly to the Internet to do business, often operating unprotected as they bypass their established security infrastructure. Governments, corporations, non-profits and more are now faced with the challenge of cost-effectively managing and securing massive amounts of valuable digital assets outside their own networks, accessed by laptops, tablets and smartphones. They need your help.

As an MSP, ISP or SaaS vendor, you must offer affordable security solutions for your prospects, both to attract them to your service offerings and to keep them as clients. The costs of buying, deploying, and maintaining proxy type appliance security solutions can escalate out of control quickly for service providers securing globally distributed offices and remote users.

Global Velocity's Securio™ solution solves this problem. It integrates information-centric security protection across web, email and mobile Internet traffic to secure sensitive data and IP outside a firewall. This powerful architecture scans all outbound Internet traffic from any device or location and protects against data loss from mobile devices such as laptops, tablets and smartphones -- all with a single, consistent global security policy.

You're in Control. Unified Policies. Easy Administration.

- Deploy Global Velocity's Securio solution in hours —not months.
- Stop data loss across all users no matter what device they're using or where they're located — all with a single unified security policy.
- Meet or exceed compliance and governance requirements for your customers with predefined security templates and extendable custom policies and reporting.

Global Velocity

Benefits

- **Instant Access:** Simple user access setup. Any user, any device, located anywhere.
- **Unified Policy Management:** Provide a single policy across multiple devices and applications, greatly reducing administration and operating requirements.
- **Real-time Consolidated Reporting:** Consolidated reporting and analysis across users and devices no matter where they're located.
- **Compliance Templates:** Pre-configured policies meet or exceed requirements for PII, PCI and HIPAA. Additional customized policies can be created easily and implemented to address the "next big thing" in data security.
- **SSL Support:** Full content inspection of SSL outbound traffic.
- **As Fast as You Need:** No matter what your demand for speed, Securio delivers.
- **Policy as a Service:** Interactively query the policy engine to integrate our solution directly into your applications.

Features

- **Easy to Provision:** No hardware or agent software to install. Fast startup yields immediate results.
- **Flexible:** Easy to customize to align with changing requirements to prevent data loss from multiple locations, remote users and mobile devices.
- **Scalable:** Built in a fully, virtualized information-centric security protection architecture to leverage massively scalable computing concepts. The solution scales as your customers need more capacity. If they add an office -- no problem. If they start to use smartphones and tablets to access the Internet -- no problem.
- **Lower TCO:** No hardware to purchase. Low setup fees. Low operating costs. The virtualized processes are started and stopped as required, resulting in lower resource utilization. This yields better margins to service providers and SaaS vendors.
- **Pay-as-You-Go:** Simple and fair monthly subscription pricing to allow your customers to pay as they go for the protection they receive. Easy to budget. No hidden fees.

Summary

Cloud computing and mobile devices are here to stay. It's time to move from perimeter-based security to an information-centric security approach. Mobile and remote user security starts in the cloud.

Imagine directing your Internet traffic through a simple and cost-effective infrastructure that is globally available -- an infrastructure that provides the same policy and protection whether users are in an office using their desktops, on the road at a hotel or airport using their smartphones or tablets, or at home using their laptop.

Enhanced data security is now possible -- only with Global Velocity's Securio solution.
