

## Securio™ Cloud Managed Service

Comprehensive information-centric security protection  
across web, email and mobile

**global velocity**  
Securing data from the inside out™

**CEE, Corp.**

Core  
Engineering Enterprises

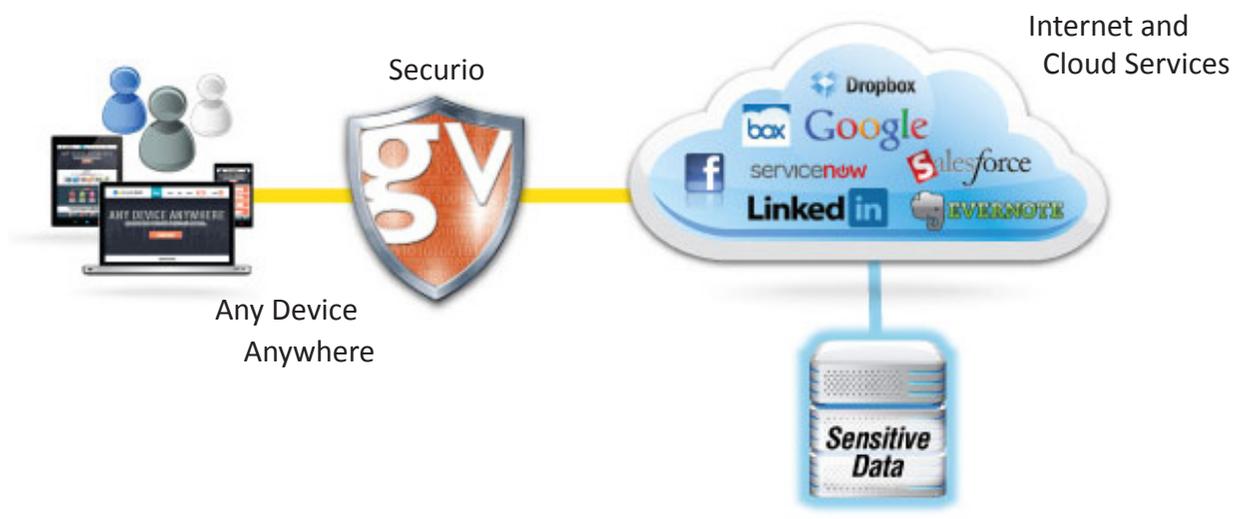

## Overview

In today's business environment companies of all types are turning to the cloud as a viable alternative for data storage and software-as-a-service (SaaS) solutions. As a result, more and more users are going directly to the Internet to do business, often operating unprotected bypassing their established corporate security infrastructure. Governments, corporations, non-profits and more are now faced with the challenge of cost-effectively managing and securing massive amounts of valuable digital assets outside their corporate network, accessed by laptops, tablets and smartphone devices.

For small businesses, the problem is even more difficult to solve because small businesses usually have small IT departments and capital resources are not typically allocated to build out and manage robust security solutions. A new security model is needed to deal with these changing requirements.

Global Velocity's Securio™ solution solves this problem. It integrates information-centric security protection across web, email and mobile Internet traffic to secure sensitive data and IP outside a company's firewall. This powerful architecture scans all outbound Internet traffic from any device or location and protects against data loss from mobile devices such as laptops, tablets and smartphones - all with a single, consistent global security policy.

Because it's a SaaS application, you receive the highest level of service with minimal impact on your IT organization.

## You're in Control. Unified Policies. Easy Administration.

- No hardware or agent software to install. Simply point your devices to the Securio platform, select the security policies to enforce, and we provide the protection.
- Stop data loss across all users no matter what device they're using or where they're located — all with a single unified security policy.
- Meet or exceed compliance and governance requirements for your business with predefined security templates and extendable custom policies and reporting.

Global Velocity

## Benefits

- **Instant Access:** Simple user setup. Any user, any device, located anywhere.
- **Unified Policy Management:** Provide a single policy across multiple devices and applications, greatly reducing administration and operating requirements.
- **Real-time Consolidated Reporting:** Consolidated reporting and analysis across users and devices no matter where they're located. Visibility directly into your Internet usage and security findings.
- **Compliance Templates:** Pre-configured policies meet or exceed requirements for PII, PCI and HIPAA. Additional customized policies can be created easily and implemented to address the "next big thing" in data security.
- **SSL Support:** Full content inspection of SSL outbound traffic.
- **High Accuracy:** Mature security detection technology results in fewer false positives.

## Features

- **Easy to Provision:** No hardware or agent software to install. Fast startup yields immediate results.
- **Flexible:** Easy to customize to align with changing requirements to prevent data loss from multiple locations, remote users and mobile devices.
- **Scalable:** Built in a fully virtualized information-centric security protection architecture to leverage massively scalable computing concepts. The solution scales as you need more capacity. Add an office - no problem. Start to use smartphones and tablets to access the Internet - no problem.
- **Lower TCO:** No hardware or agent software to purchase. Low setup fees. Low operating costs.
- **Pay-as-You-Go:** Fair monthly subscription pay-as-you-go pricing to simply pay for the protection you receive. Easy to budget. No hidden fees.

---

## Summary

Cloud computing and mobile devices are here to stay. It's time to move from perimeter-based security to an information-centric security approach. Mobile and remote user security starts in the cloud.

Imagine directing your Internet traffic through a simple and cost effective infrastructure that is globally available — an infrastructure that provides the same policy and protection whether users are in the office using their desktop, on the road at a hotel or airport using their smartphone or tablet, or at home using their laptop.

**Enhanced data security is now possible — only with Global Velocity's Securio solution.**
